KAIROS ANNOUNCES LITHIUM SURFACE BRINE CONCENTRATIONS UP TO 1110 MG/L FROM CONTINUED SAMPLING ON TWO ADDITIONAL CHILEAN LITHIUM PROPERTIES

TSX Venture Exchange: “KRS” FOR IMMEDIATE RELEASE

CALGARY, ALBERTA March 27, 2017 – Kairos Capital Corporation (“Kairos”) is pleased to announce that it has received highly significant lithium values from its Helados and Ascotan properties. The results were obtained from both brine and salt samples directly at surface and within 1.5 metres of surface from hand dug pits and auger holes.

Highlights

1) Helados

- Surface brine lithium concentrations from southwest flank of the laguna at Helados range from a low of 390 mg/l to a high of 1110 mg/l and average 645 mg/l.
- The Helados property is located 80 km east the Salar de Atacama just six km from the highway between Chile and Argentina and lies within the same geological and physiographic zone as the lithium enriched Salar de Maricunga and Salar La Isla.

2) Ascotan

- Surface brine lithium concentrations from the west flank of the halite core at Ascotan range from a low 280 mg/l to a high of 580 mg/l and average 465 mg/l.
- The Ascotan property is located 120 km north of and within the same geological and physiographic zone as the Salar de Atacama, the current source of about 30% of World Lithium production.

Sampling completed to date covers approximately 15% of the 77 km² Helados property and about 25% of the 15 km² Ascotan property.

“This third round of results include lithium concentrations that are close to the production grades at the Salar de Atacama and further re-enforces management’s belief that the acquired lithium claims have excellent potential” confirmed Terry Walker, Kairos’s Chilean based VP of Exploration.

Qualified Person

Mr. Terence Walker, M.Sc., P.Geo, qualified person within the meaning of National Instrument 43-101, has reviewed the contents of this news release. Individual brine and salt samples were collected from surface pools and shallow 0.5 – 1.5m hand dug pits and auger holes. Brine samples were collected in new 40 ml screw top sterile vials that were sealed and tagged at the sample site. All samples were shipped to ALS Patagonia Laboratories, Santiago, Chile, where they were prepared and the subsequent brine analyses were performed at the ALS Laboratory in Vancouver, Canada.
About Kairos
Kairos is a Canadian Corporation whose common shares are listed for trading on the TSXV (ticker symbol “KRS”).

Kairos currently holds a significant land position of approximately 360 square kilometers on seven salars in Chile that are prospective for Lithium.

Kairos also holds an additional portfolio of six properties totalling 269 square kilometers, also located entirely within Chile that management believes hold excellent potential for copper/gold/silver deposits.

Kairos has completed a small reconnaissance drilling program on its Salvadora copper/gold/silver property to test a number of surface copper-gold, geophysical and historical mining targets.

A reconnaissance sampling program over Kairos’ Lithium property package is ongoing.

Forward Looking Statements

This news release may contain certain forward-looking information and forward-looking statements within the meaning of applicable securities legislation (collectively “forward-looking statements”). Generally, forward-looking information can be identified by the use of forward-looking terminology such as "expects", "believes", "aims to", "plans to" or "intends to" or variations of such words and phrases or statements that certain actions, events or results “will” occur. In particular, this news release contains forward-looking statements relating to, among other things, management of the Corporation’s views regarding its properties and the ability of the Corporation to conduct exploration on its properties.

Various material factors and assumptions are typically applied in drawing conclusions or making the forecasts or projections set out in forward-looking statements. Those material factors and assumptions are based on information currently available to the Corporation, including information obtained from third party industry analysts and other third party sources. In some instances, material assumptions and material factors are presented elsewhere in this news release in connection with the forward-looking statements. You are cautioned that the following list of material factors and assumptions is not exhaustive. Specific material factors and assumptions include, but are not limited to: the general stability of the economic and political environment in which the Corporation operates; the timely receipt of required regulatory approvals; the ability of the Corporation to obtain future financing on acceptable terms; currency, exchange and interest rates; operating costs; and the success the Corporation will have in exploring its prospects and the results from such prospects. Accordingly, readers should not place undue reliance on forward-looking statements. The Corporation does not undertake to update any forward-looking statements herein, except as required by applicable securities laws. All forward-looking statements contained in this press release are expressly qualified by this cautionary statement.
